Saad El Aboudi

Senior AI & Product Consultant · Builder · Founder

elaboudisaad@gmail.com · France · github.com/saadelaboudi · French & English (Fluent)

PROFILE

Senior AI & Product Consultant with 7+ years across tier-1 financial institutions (BNP Paribas, BPCE, Bouygues Telecom) and as a startup founder (Diskyver). Deep expertise in GenAI production systems — evaluation frameworks, RAG pipelines, agentic architectures — combined with strong enterprise product delivery (event-driven architectures, IAM, SAFe). Currently managing a team of ~40 across two data transformation programs at BNP Paribas AI Factory. Active builder: ships AI products end-to-end using GitHub Copilot, Codex, and Claude Code (Hackit, SLAP$TAX).

CORE SKILLS

AI & GenAI LLMs, RAG, Agentic AI, Evaluation frameworks, AI governance	**Product Management** Discovery, roadmap, backlog, KPIs, SAFe/Agile, Jira	**Data & Cloud** GCP (Pub/Sub, BigQuery, GKE, AlloyDB), event-driven, Python	**AI-Assisted Building** GitHub Copilot, Codex, Claude Code, React, Node.js, WebSocket
IAM & Security Keycloak, least privilege, secret management, compliance	**Team Leadership** ~40 contributors managed, mentoring, enterprise pre-sales	**Analytics & NLP** Power BI, NLP pipelines, verbatim classification, data migration	**Go-to-Market** Pricing, monetization, retention loops, growth design, PMM

PROFESSIONAL EXPERIENCE

Senior Consultant – AI, Data & Cloud · Talan *Nov 2023 – Present*

Deployed on two major transformation programs for tier-1 financial institutions. Internal Talan role: AI practice contribution, junior consultant mentoring, pre-sales support.

BNP Paribas – AI Factory | AI Transformation Consultant & Team Lead *Sept 2025 – Present*

- Led a team of ~40 contributors including 10 full-time contractors — operational coordination, performance tracking, weekly rituals and cross-team alignment.
- Oversaw two critical data transformation workstreams: (1) large-scale verbatim classification using NLP/LLM pipelines; (2) migration of an unstructured database to a structured one consolidating all banking powers for corporate clients.
- Designed and evaluated GenAI use cases in production: document classification, automatic summarization, and RAG pipelines on large unstructured corpora.
- Built the AI evaluation framework: performance metrics, benchmarks, governance principles, and responsible production criteria.
- Facilitated executive and technical workshops to surface and prioritize high-impact AI use cases across business units.

LLMs | **RAG** | **NLP** | **GenAI** | **AI Governance** | **Data Migration** | **Team Management**

Groupe BPCE / Hexarq | Technical & Functional Product Owner (SAFe) *Jan 2024 – Sept 2025*

- PO on a regulated crypto-asset trading platform built from scratch — multi-team SAFe environment.
- Co-designed the full event-driven architecture with enterprise architects: Pub/Sub topics, schemas, subscriptions and consumption patterns for real-time transaction flows.
- Designed the complete IAM architecture in Keycloak: modeling of client/prospect/user entities, role and permission matrices, full user lifecycle management (onboarding, role changes, revocation).
- Defined the data architecture for customer activity monitoring and production of regulatory KPIs.
- Governed secret management strategy: access policies, key isolation, rotation schedules.

GCP | **Pub/Sub** | **AlloyDB** | **GKE** | **Keycloak** | **IAM** | **SAFe** | **Event-Driven Architecture**

Digital & Data Consultant – PIM · Courir *Mar – Sep 2023*

- Led PIM solution selection: stakeholder workshops, data process mapping, product referential structuring, and full RFP management.

CEO · Diskyver *Jan 2021 – Sep 2024*

B2B SaaS startup — near real-time anomaly detection and cyberattack identification on enterprise VoIP/SIP infrastructures.

- Full P&L ownership: strategy, roadmap, architecture, delivery, investor relations, crisis management, strategic pivots.
- Recruited and managed engineering, sales and marketing teams — from idea to production.
- Designed SIP traffic analytics pipelines and behavioral anomaly detection models.
- Developed B2B enterprise pipeline: pre-sales, demos, Telco/IT integrator partnerships.

Python | **SIP/VoIP** | **Anomaly Detection** | **ML** | **B2B SaaS** | **P&L** | **Leadership**

Pre-Sales Engineer · Bouygues Telecom Entreprises *2020*

- Pre-sales and RFP responses on fixed network solutions for enterprise and public sector clients. Commercial proposals and client portfolio analysis.

PLM Migration Consultant · Airbus / Capgemini *2019*

- Large-scale PLM data migration in a safety-critical industrial environment — functional specs, configuration, testing and data integrity validation.

R&D Machine Learning Engineer · Invivox *2018*

- Built AI recommendation algorithms (collaborative filtering, hybrid models) for a healthcare SaaS platform.

SELECTED PROJECTS — BUILDER & AI

Products designed and shipped independently — intensive use of GitHub Copilot, OpenAI Codex and Claude Code throughout the development cycle.

🧠 Hackit · *AI Collaborative Workspace* *2025 – Present*

- Designed an AI-native collaboration model where real-time conversations are the core interface and AI is triggered via slash commands (/doc, /search, /decide, /brief, /mission, /share).
- Built 6 specialized AI personas (strategist, researcher, analyst, facilitator, writer). Multi-agent orchestration, Slack & Notion integrations, real-time WebSocket architecture.

Multi-Agent Systems | **LLM Orchestration** | **React** | **Node.js** | **WebSocket** | **GitHub Copilot**

🎮 **SLAP$TAX** · *AI-Assisted Product Builder* *2025 – Present*

- Competitive skill-gaming mobile platform: 1v1 challenges, tournament brackets, matchmaking, player wallets, and a Ban/Pick system inspired by esports formats.
- Defined full product strategy: gameplay loops, monetization model, retention systems. React/Vite + Node.js stack built end-to-end via AI-assisted development workflows.

React | **Vite** | **Node.js** | **Monetization** | **Growth Design** | **AI-Assisted Dev**

🤖 **Agentic CX Operations PoC** · *Proof of Concept — Delivered in Client Context* *2024*

- Designed an autonomous customer support agent: intent recognition, contextual decision-making, action execution without scripted workflows, intelligent escalation.
- Evaluated operational impact: AHT reduction, automation rate improvement, SLA gains.

Agentic AI | **NLP** | **Intent Recognition** | **Governance** | **GitHub Copilot**

EDUCATION

- **Engineering Degree – Telecommunications & Computer Science** · Bordeaux INP (ENSEIRB-MATMECA)
  2016 – 2019 . Specialization: Telecom & Software Engineering
- **Master of Science – Business Management** · EDHEC Business School *2019 . Strategy, Innovation, Digital Transformation*
